

1

Q.

A number is increased by 20% and then again Increased by 20%, the final value of the number is ?

- (1) increase by 2% (2) decrease by 3%
 (3) decrease by 4% (4) increase by 5%
 (5) None of these

$$\cancel{20} - \cancel{20} - \frac{20 \times 20}{100} = 4\%$$

2

Q.

A number is increased by 20% and then decreased by 20%, the final value of the number is ?

- (1) increase by 2% (2) decrease by 3%
 (3) decrease by 4% (4) increase by 5%
 (5) None of these

$$- \frac{x^2}{100}$$

3

Q.

The price of an article rose by 25% every odd year and fell by 20% every even year, what would be the percentage change after 180 years?

$$100 \times \frac{5}{4} \times \frac{4}{5} \times \frac{5}{4} \times \frac{4}{5} \times \dots$$

180

$$= \underline{\underline{100}}$$

No chan.

4

Q.

Find a single equivalent increase, if a number is successively increased by 10%, 20% and 25%.

$$\begin{array}{cc} 10 & 20 \\ \hline \end{array}$$

$$\begin{array}{c} 32 \\ \parallel \\ a \end{array}$$

$$\begin{array}{c} 25 \\ \parallel \\ b \end{array}$$

$$32 + 25 + \frac{8}{100} \times 32$$

$$57 + 8$$

$$\underline{\underline{65\%}}$$

$$\frac{a}{10} + \frac{b}{20} + \frac{ab}{100} \times \frac{200}{100} \times 2$$

Q.

Find a single equivalent increase, if a number is successively increased by 10%, 20% and 25%.

$$\frac{1}{10} \quad \frac{1}{5} \quad \frac{1}{4}$$

$$\begin{array}{c} N \\ \downarrow \\ \textcircled{200} \end{array} \times \frac{11}{10} \times \frac{6}{5} \times \frac{5}{4} = 330$$

$$\frac{+130}{200} \times 100 = \underline{\underline{65\%}}$$

$$\frac{1}{5}$$

$$\frac{2}{5}$$

Q.

The length of a rectangle increased by 40% and its breadth increased by 20%. What will be the percentage change in the area of the rectangle?

(1) 50% inc (2) 10% inc (3) 44% inc (4) 68% inc (5) None of these

$$\textcircled{a} \quad a + b + \frac{ab}{100} \\ \approx 68\%$$

$$A = 1 \times 5 = 5 \\ \approx 7 \times 6 = 42$$

$$\frac{17}{25} \times 100 \\ \underline{\underline{68\%}}$$
