Q.7(B). A man gives a discount of 8.33% on his goods & still makes a profit of 10% by what % did he mark-up his goods?

- a. 12% b. 8% c. 20% d. NOT

8.33% = $\frac{1}{12}$

$CP \times M.F = S.P$

CP — M.P — S.P

10 — 12 — 11

$CP \times \frac{11}{10} = 11$

Q.8 A man marks up an article by 12.5% & then gives a discount of 27.27%. what

Q.10 The marked price of an electric iron is Rs.300. The shopkeeper allows a discount of 12% and still gains 10%. If no discount is allowed his gain percentage would have been?

25%

CP — MP — SP

240 — 300 — 264

$\frac{60}{240} \times 100$

$CP \times \frac{11}{10} = 264$

25%

Q.11 The mark price of an article is Rs. 300. After allowing a discount 15% on the marked price, the shopkeeper makes a gain of Rs. 15. What is the gain percentage?

Handwritten solution:

$$\begin{array}{ccc}
 \text{C.P.} & \text{M.P.} & \text{S.P.} \\
 240 & 300 & 255
 \end{array}$$

Calculation for S.P.:

$$300 - 15\% \text{ of } 300 = 300 - 45 = 255$$

Calculation for Gain Percentage:

$$\frac{15}{240} \times 100 = 6.25\%$$

Directions: Given below is the table which shows the 5 products sold by a manufacturer, % discount offered on marked price and % profit earned on cost price.
